

OFFSHORE GUINEA BISSAU DATA PACKAGES

Minimum Geologic Package for Block Applications

- **Well Data for both the Offshore and Onshore -**
Contains at least 10 Offshore Well Logs and 4 Onshore Well Logs.
(Available as image files on CD, Paper, and LAS Format – Reproduction and Digital Files are extra charges. Las Well Files are available at \$500 per well)
- **Well Summary Sheets for all 14 of the Wells Drilled**
in Guinea Bissau
- **"The Geology and Petroleum Potential of the Offshore of the Republic of Guinea Bissau"**
by Thomas H. Nelson, a salt tectonics expert.
 - This study contains descriptions and failure analysis of all 10 offshore wells
 - Well Correlation Profile
 - Contains approximately 400 kms. of original Pecten 2D seismic; with geologic interpretation. Full License to 1988 Pecten Seismic not included at this price.
- **New Geologic Synthesis and Play concepts on the Offshore Region: "Hydrocarbon Potential of Guinea Bissau - Biostratigraphic Well Correlation"**
by Ray Bate, Nick Cameron, Andrew Carr & John Dombrowski

The License Fee for the basic data package described above is US \$29,800

Hard copy and digital reproduction charges are additional.

ALSO AVAILABLE:

- 9,000 km of reprocessed 1980's 2-D seismic in the Salt Basin, completed in 2000
- \$50 / km
- 3,726 km of newly completed deepwater 2-D seismic

We have also prepared an additional list of geologic products that are optional but that would assist you with your evaluation of this area. They include A Petroleum Systems Report and Select Well Completion Reports.
