

FIRST EXCHANGE has exclusive representation contracts with PETROSEN, PETROGUIN, and the AGC for geotechnical data distribution and block promotion. All of the older seismic data on this plat was or is now being reprocessed by FEC and its predecessors in order to deliver workstation-ready data with the best possible geologic depiction. The new 3600 km of Deepwater Guinea-Bissau data is available for license. FEC also has 3D surveys available over the Dome Flore structure in the AGC area, and also over Block 4A/5A in the Guinea Bissau Salt Basin. See outline below -
